Art Unit: 2141

## **DETAILED ACTION**

1. This is in response to RCE filed on 2/25/05 in which claims 1-3, 6-8, 10-16, 18-20 and 22-35 are pending.

## Response to Arguments

2. As per claims 1, 15, 25 and 29, Applicant argues that Gopal teaches away from the present invention in that the network controller also named the network manager is not a person or a personnel but a component within the data management network. However, Gopal teaches wherein the alert messages are transmitted to network managers or other personnel responsible for maintaining the system (See page 2, paragraph [0021]). Furthermore, Applicant argues that the physical status of components of a network over which the present claimed invention is conducted is beyond the scope of the present invention. However, Applicant's invention clearly claimed "monitoring an internet gateway, through which the business-to business transaction passes for timer expiration exceptions, transaction exceptions, and network exceptions" which are "physical status" of component of a B2B transaction.

## Claim Rejections - 35 USC § 103.

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 09/727,841

Art Unit: 2141

4. Claims 1-2, 6-7,13-15, 19, 25, 27-29, 30-35 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Application No. 2001/0032263 to Gopal et al in view of U.S. Patent No. 6,289,333 to Jawahar et al.

Page 3

a. As per claims 1, 15, 25 and 29, Gopal et al teaches a method exceptions in a business-to-business transaction, comprising the steps of: monitoring an internet gateway, through which the business-to-business transaction passes for timer expiration exceptions, transaction exceptions, and network exceptions wherein if an exception is detected: automatically locating an authorized representative, wherein the authorized representative is a designated person who has authority to consummate the business-to-business transaction; automatically notifying the authorized representative of the exception (See page 2, paragraph [0021]); However, Gopal et al fails to teach automatically establishing a collaboration session between representatives of the business-to-business transaction.

Jawahar et al teaches establishing a web collaboration session between representatives of the business-to-business transaction, wherein the web collaboration session comprises page sharing, follow-me, form share, text chat, application demonstration, application sharing and white boarding functions (See col. 2, lines 12-17 and col. 3, lines 60-62).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate establishing a collaboration session between representatives of the business-to-business transaction wherein the web collaboration session comprises page sharing, follow-me, form share, text chat, application demonstration, application sharing and white boarding functions as taught by Jawahar et al in the claimed invention of Gopal et al in order to retrieve resources provided from one client to the other client (See page 2, lines 16-18)

b. As per claims 2, 26 and 30, Gopal et al teaches wherein an intelligent contact manager to automatically locate the authorized representative (See page 2, paragraph [0021]).

Art Unit: 2141

c. As per claim 6, Gopal et al teaches using a unified communication system to automatically notify the authorized representative of the exception (See page 2, paragraph [0021]).

- d. As per claims 7 and 19, Gopal et al teaches wherein the unified communication system comprises voice messaging, email messaging, and fax messaging (See page 2, paragraph [0021]).
- e. As per claims 13, 27 and 31, Gopal et al teaches wherein the business-to-business transaction is handled through e-mail and LDAP containing XML data (See page 2, paragraph [0009 and 0021])
- f. As per claims 14, 28 and 32, Gopal et al teaches wherein the exception is handled by email (See page 2, paragraph [0021]).
- g. As per claim 33, Gopal et al teaches issuing a times expiration exception when a sending application does not receive a confirmation within a predetermined time period (See page 6, paragraph [0048]).
- h. As per claim 34, Gopal et al teaches wherein generating a transaction exception when content, format, security, availability, or other characteristics of said transaction are out of predetermined boundaries (See page 2, paragraph [0021]).
- I . As per claim 35, Gopal et al teaches wherein generating a network exception when a messaging infrastructure cannot support a message transaction (See page 2, paragraph [0021]).
- 5. Claims 3 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Application No. 2001/0032263 to Gopal et al in view of U.S. Patent No. 6,289,333 to

Art Unit: 2141

Jawahar et al. as applied to claim 2 above, and further in view of U.S. Patent Application No. 2004/0049562 to Kikinis.

a. As per claims 3 and 16, Gopal et al teaches wherein the intelligent contact manager comprises the functions of pre-routing, post-routing (See page 3, paragraph [0024]). However, Gopal et al in view of Jawahar et al fails to teach wherein the intelligent contact manager comprises the functions customer-profile, computer telephony integration, enterprise-wide reporting, web interaction, remote agent support, voice recognition integration, and workforce management integration.

Kikinis teaches wherein the intelligent contact manager comprises the functions customer-profile, computer telephony integration, enterprise-wide reporting, web interaction, remote agent support, voice recognition integration, and workforce management integration (See page 3, paragraph [0024] and page 5, paragraph [0043]).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein the intelligent contact manager comprises the functions as taught by Kikinis in the claimed invention of Gopal et al in view of Jawahar et al in order to transmit data over networks as data packets 9see page 1, paragraph [0003]).

- 6. Claims 8 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Application No. 2001/0032263 to Gopal et al in view of U.S. Patent No. 6,289,333 to Jawahar et al. as applied to claim 4 above, and further in view of U.S. Patent Application No. 2002/0194272 to Zhu et al.
- a. As per claims 8 and 20, Gopal et al in view of Jawahar et al teaches the claimed invention as described above. However, Gopal et al in view of Jawahar et al fails to teach wherein the unified communication system comprises a telephone call, a sequence of contacts, an SMS

Art Unit: 2141

message to a called party's pager or cell phone, or incoming calls being routed through a series of telephone numbers based on peer, person, or LDAP list.

Zhu teaches wherein the unified communication system comprises a telephone call, a sequence of contacts, an SMS message to a called party's pager or cell phone, or incoming calls being routed through a series of telephone numbers based on peer, person, or LDAP list (See page 1, paragraph [0006])

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein the unified communication system comprises a telephone call, a sequence of contacts, an SMS message to a called party's pager or cell phone, or incoming calls being routed through a series of telephone numbers based on peer, person, or LDAP list as taught by Zhu et al in the claimed invention of Gopal et al in view of Jawahar et al in order to handle calls from a number of customers (See page1, paragraph [0005]).

- 7. Claims 10-12, 22-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over .S. Patent Application No. 2001/0032263 to Gopal et al in view of U.S. Patent No. 6,289,333 to Jawahar et al as applied to claim 1 and 22 above, and further in view of U.S. Patent Application No. 2002/0049622 to Lettich et al.
- a. As per claims 10 and 22, Gopal et al in view of Jawahar et al teaches the claimed invention as described above. However, Gopal et al in view of Jawahar et al fails to teach wherein the apparatus handles exceptions corresponding to demand planning.

Lettich et al teaches demand planning. (See 15, paragraph [0294]).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein the apparatus handles exceptions corresponding to demand planning as taught by Lettich et al in the claimed invention of Gopal et al in view of Jawahar et al in order to enable companies to meet the challenges of rising global networks (See page 1, paragraph [0003])

Art Unit: 2141

b. As per claims 11 and 23, Gopal et al in view of Jawahar et al teaches the claimed invention as described above. However, Gopal et al in view of Jawahar et al fails to teach wherein business-to-business (B2B) processing utilizes the engine to perform steps of requisitioning, purchasing, approval, ordering, receiving, distribution, payment, and measurement.

Lettich et al teaches wherein business-to-business (B2B) processing utilizes the engine to perform steps of requisitioning, purchasing, approval, ordering, receiving, distribution, payment, and measurement (See page 2, paragraph [0023]).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein business-to-business (B2B) processing utilizes the engine to perform steps of requisitioning, purchasing, approval, ordering, receiving, distribution, payment, and measurement as taught by Lettich et al in the claimed invention of Gopal et al in view of Jawahar et al in order to enable companies to meet the challenges of rising global networks (See page 1, paragraph [0003])

c. As per claims 12 and 24, Gopal et al in view of Jawahar et al teaches the claimed invention as described above. However, Gopal et al in view of Jawahar et al fails to teach the step of handling exceptions corresponding to procurement processes.

Lettich et al teaches wherein the exception corresponds to procurement processes (See page 2, paragraph [0023]).

It would have been obvious to one with ordinary skill in the art at the time the invention was made to incorporate wherein the exception corresponds to procurement processes as taught by Lettich et al in the claimed invention of Gopal et al in view of Jawahar et al in order to enable companies to meet the challenges of rising global networks (See page 1, paragraph [0003])
